

Venchie Badong, RCh, MAT
University of the Immaculate Conception, here in Davao City, Philippines

vbadong@uic.edu.ph

Research team from University of the Immaculate Conception, Davao City, Philippines is looking for a Bulgarian partner to collaborate with to study how changes in climate could change the biodiversity and ecological balance in lakes in Mindanao - the second major island in the Philippines. Our current partners for this endeavor are researchers from University of Malaya (Malaysia) and Naresuan University (Thailand).

In the meantime, allow me to provide the capabilities of the University's laboratory. Our laboratory here in Davao City is capable of doing studies related to ecological, microbiological, and eDNA methods but we don't have expertise on how to make models to assess the present and future impact of climate change on biodiversity. This request is based on the call of researchers and Partners for **SEA-EU Call in the area of Climate Change: Resilience and Adaptation** of the DOST-PCIEERD.
